

ANAS MURTAZA

Software Engineer II — Backend Engineering — Java — Distributed Systems — Generative AI
anasmurtaza33@gmail.com • +91-9541527062 • LinkedIn • GitHub

PROFESSIONAL SUMMARY

Application Software Engineer II at Oracle with experience building and optimizing backend systems serving 6M+ users. Focused on backend architecture, distributed systems, performance optimization, production reliability, security engineering, and applied Generative AI.

TECHNICAL SKILLS

Languages: Java, SQL

Backend: Spring Boot, REST APIs, Microservices, JPA/Hibernate

Databases: Oracle Database, HikariCP

Cloud & Infrastructure: Oracle Cloud Infrastructure (OCI), OCI Vault, Jenkins, OCI DevOps, CI/CD

AI & Generative AI: Retrieval-Augmented Generation (RAG), Vector Embeddings, Agentic AI, LLM Applications, AI-Assisted Development

Engineering: Distributed Systems, System Design, Scalability Engineering, Performance Optimization, Security Engineering, Production Support

EXPERIENCE

Oracle | Aconex

Hyderabad, India

Application Software Engineer II (IC2)

Oct 2026 – Present

- Own critical backend services for Oracle Aconex Document Processes (DPC), supporting large-scale document workflows and contributing to the platform's reliability and maintainability.
- Drive backend initiatives from system design and implementation through testing, deployment, and production support; contribute to technical design reviews and engineering decisions focused on scalability and reliability.

Application Software Engineer

Aug 2023 – Oct 2026

- Served as the **primary engineering point of contact** for **Oracle Aconex Document Processes (DPC)**, supporting platforms used by **6M+ users** across hundreds of thousands of projects and millions of documents worldwide.
- Designed a **scalable metadata synchronization architecture** using **bulk backfill** and **event-driven synchronization**, ensuring real-time data consistency between Aconex and external services.
- Re-architected **Start Review processing** for workflows containing up to **3,000 documents**, using **parallel batch processing** and **fixed-thread execution** to reduce runtime to **<30 seconds** and save **4 weeks of engineering effort**.
- Modernized services from **Java 11 to Java 17** and upgraded **Spring Boot** and **Helidon** with zero production disruption; migrated connection pooling from **UCP to HikariCP**, eliminating recurring production failures.
- Optimized Java-based backend services and document-processing workflows, reducing metadata search latency by **40%**.
- Led remediation of **500+ security findings across 5 services**, acting as **security SPOC** and resolving release-blocking vulnerabilities.
- Resolved a **Sev1 production incident**, coordinating critical fixes for a successful overnight deployment.
- Increased **unit test coverage from 39% to 85%** using AI-assisted test generation, improving release confidence and reducing regression risk.
- Built **ScanMasterPro**, a GPT-powered security remediation platform adopted across Aconex teams and integrated as an **Oracle-supported Codex plugin**, saving up to **2 developer-days per release** in remediation effort.

Project Intern

Feb 2023 – Aug 2023

- Developed backend enhancements for Oracle Aconex workflow and document-management platforms, contributing to feature delivery, testing, production issue analysis, and reliability improvements.

EDUCATION

National Institute of Technology Srinagar

2019 – 2023

Bachelor of Technology (B.Tech), Information Technology

CERTIFICATIONS & ACHIEVEMENTS

OCI Generative AI Certified Professional — SQL (Advanced)

- **Oracle Hackathon Runner-Up** – Built an AI-powered Gherkin test-case generation platform that generated acceptance-test scenarios from Jira user stories.
